Billing for calls placed over the Company's network is based in part on the duration of the call. Timing of each call begins as specified below, and ends when the Called Station hangs up. Timing begins when the Called Station is answered, as determined by standard industry methods generally in use for ascertaining answer, including hardware answer supervision in which the local telephone company sends a signal to the switch or the software utilizing audio tone detection or other methods. Usage is measured and rounded to the next highest billing increment as specified for subscribed services in applicable state tariffs. There is no billing for incomplete calls. Each call is rated and billed in whole cents according to the following conventions: (1) Calls made using any service by the Company are rounded up to the next cent at the termination of the call; and (2) Special rounding arrangements may be made through contractual arrangements.
