**SECTION 3 - RATES AND CHARGES (CONT'D.)**

3.3 Calculation of Charges

3.3.1 Timing of Calls

Unless otherwise specified for a particular service, charges for service will be based on the number of minutes of Service used by Customer, time of day at which the Service is used, and the distance between the origination and termination points of the call.

For the purpose of computing charges, a call begins at the time that the hardware or software answer supervision indicates that the call has been answered at the distant end, and terminates when you hang up. Applicable usage charges apply for all calls that are answered regardless of the length of the calls. In addition, applicable usage charges apply whenever the calling party does not hang up at least 60 seconds after completion of dialing regardless of whether the call has been answered.

Unless otherwise specified for a particular service, (a) the minimum charge for any call is the applicable rate for one minute; and (b) calls will be billed in one-minute increments, with any fractional portion of a minute rounded up to the next full minute. The initial and each additional billing increment is specified for each service described in Section 3.

For the computation of charges, the duration of each call is measured and rounded up to the applicable billing increment, then multiplied by the applicable rate and if the computed charge for any individual call results in a fraction of a cent, the fraction is then rounded up to the next whole cent on a per call basis. For example, a service may provide that each call will be charged a minimum of 18 seconds and thereafter timed in 6-second increments; therefore, under this example, a 10-second call will be rounded up to 18 seconds (0.3 minutes), and a 44-second call will be rounded up to 48 seconds (0.8 minutes). If, after multiplying the billing increment by the applicable rate, the computed charge for an individual call results in a fraction of a cent, the fraction is rounded up to the next whole cent (for example, \$1.523 would round up to \$1.53). Once the charge for each call is computed as described above, the calls are summed on the Customer's invoice.

Calls will be billed at the rate in effect during the call, with two rates applied if the call spans over more than one billing rate period.

7.2 Public Pay Telephone Surcharge

In order to recover the Company's expenses to comply with the FCC's pay telephone compensation plan effective on October 7, 1997 (FCC 97-371), an undiscountable per call charge is applicable to all interstate, intrastate and international calls that originate from any domestic pay telephone used to access the Company's services. The Public Pay Telephone Surcharge, which is in addition to standard Pricing Guide usage charges and any applicable service charges and surcharges associated with the Company's service, applies for the use of the instrument used to access the Company service and is unrelated to the Company's service accessed from the pay telephone.

Pay telephones include coin-operated and coinless phones owned by local telephone companies, independent companies and other interexchange carriers. The Public Pay Telephone Surcharge applies to the initial completed call and any reoriginated call (i.e., using the "#" symbol).

Whenever possible, the Public Pay Telephone Surcharge will appear on the same invoice containing the usage charges for the surcharged call. In cases where proper pay telephone coding digits are not transmitted to the Company prior to completion of a call, the Public Pay Telephone Surcharge may be billed on a subsequent invoice after the Company has obtained information from a carrier that the originating station is an eligible pay telephone.

The Public Pay Telephone Surcharge does not apply to calls placed from pay telephones at which the Customer pays for service by inserting coins during the progress of the call.
